Education

BS COMPUTER SCIENCE

2018 – 2022

Superior University, Lahore. 📄

Professional Experience

Senior Angular Developer

09/2024 – present | Lahore, Pakistan

Techset Solution

At Techset, I progressed from a Senior Developer to a Small Team Lead:

- **Client Communication:** Managed client communications, coordinated meetings, and handled project management responsibilities to ensure seamless project execution.
- **Technical Expertise:** Led development efforts using Angular and integrated third-party services for multiple projects, contributing extensive technical expertise.
- **Team Collaboration:** Promoted a collaborative work environment by mentoring junior developers and working closely with cross-functional teams. This role sharpened my management skills, enhanced my ability to interact with clients, and deepened my expertise in modern web development technologies.

Angular Developer

03/2022 – 09/2024 | Lahore, Pakistan

Codeteck

After completing my internship at Codeteck, I contributed to multiple products, taking ownership of one of them.

- Key projects include Orange Traders (with templates).
- My responsibilities involved working on frontend development, UI tasks, and integrating external systems.
- I was actively involved in API implementation, utilizing reactive forms, and handling CRUD operations.
- I also integrated third-party services and collaborated with the team to ensure smooth project execution.
- I participated in client demos, presenting features and functionality.
- Additionally, I worked extensively with asynchronous programming using `async/await`, `promises`, and `callbacks`, while integrating APIs.
- As part of my work, I implemented Stripe payment integration and integrated a chat system (similar to WhatsApp) using `Socket.io` 📄.

Skills

Angular | Mono-Repo/ Microservices | Git / Bitbucket | HTML5 | Css3 |
Sass | Bootstrap | Primeng | Primeflex | Angular Material | Stripe |
Socket | GraphQL | Algolia Instant Search | Javascript ES6 / Typescript |
AWS Cognito / AWS User-pool | ng-neat/elf | Chart.js

Soft Skill

Project Management | Team Management (Leadership) | Problem Solver | Decision Maker

Projects

keys7

Keys7 is an advanced gaming web application designed for purchasing and playing games, offering a seamless platform similar to Steam and Epic Games. It prioritizes user experience with cutting-edge technologies, providing a modern, responsive, and feature-rich solution for gaming enthusiasts.

- Implemented Swiper for dynamic, responsive carousels and slideshows to showcase games, promotions, and offers.
- Utilized GraphQL for efficient data fetching, allowing granular queries and improving performance.
- Employed ng-neat/elf to manage complex app states and actions, ensuring clean and efficient state handling.
- Integrated ng-zorro components based on Ant Design to enhance UI/UX with polished, reusable, and customizable elements.
- Developed a responsive layout for smooth, optimized experiences across desktops, tablets, and mobile devices.

Sarwisi

Sarwisi is a digital platform that streamlines workflows, automating planning, coordination, and execution. It provides tools for efficient project management, real-time insights, and resource allocation, helping businesses and individuals manage complex tasks with ease.

- Implemented APIs for seamless data communication.
- Designed the user interface for a smooth and intuitive experience.
- Worked on frontend forms and implemented flows to enhance user interactions.

Omninteract

Omninteract is an innovative platform designed to enhance customer service by improving agent performance and streamlining interactions. With the Proof of Concept nearing completion, Omninteract promises a seamless, efficient experience for businesses and customers alike. We're seeking investors and early customers to help us redefine the future of customer service.

- Integrated Chart.js to visualize key statistics and data insights on the dashboard.
- Implemented role-based access controls for supervisors and agents, ensuring tailored experiences.
- Integrated APIs and utilized ng-neat/elf for efficient state and data management across the platform.
- Contributed to UI design, enhancing user experience and ensuring an intuitive interface.

Zepiex

Zepiex is a security project that involves handling highly sensitive data. In Zepiex, logged-in security guards have access to both past and future data related to location and scheduled duties.

- I was responsible for both UI development and API integration. My role included designing and creating user interfaces, as well as integrating APIs to ensure seamless functionality and data flow within the platform.

- Additionally, I was involved in integrating a map feature where all the sites were displayed with their important information. When hovering over any site, additional details and guard assignments were shown. Upon navigating to a specific site, its detailed information was displayed for further insights.

OT Customer

Orange Trader is a platform similar to PakWheels.

- I implemented a chat feature on the customer side, allowing users to interact with product owners. Using Node.js & Express with Socket.io , I developed a solution where customers can click on a product and initiate a chat with the product owner through a unique chat room (custom solution).
- I was responsible for performing API CRUD operations.
- Additionally, I implemented blog posting functionality, enabling posts from both the Admin and Vendor dashboards.
- I also integrated the Algolia InstantSearch feature to enhance application speed and provide quicker search results.

OT Vendor

- I implemented a blog posting feature for seamless content management. I also integrated auto social media posting functionality for Facebook and Instagram using the Graph API, allowing for easy sharing of content.
- I successfully implemented Stripe payment processing, including custom payment UIs and subscription plans based on user selection. I integrated Stripe elements for a smooth and secure payment experience.
- Additionally, I developed and managed an employee management system to streamline internal processes. I created subscription plans based on user preferences, allowing for flexible payment options. I developed a customized payment UI, integrated with Stripe's server, and utilized Stripe Elements to ensure secure and user-friendly transactions.
- I worked on a variety of customizable templates, providing clients with multiple options to personalize the look and feel of their websites. This enhanced the theming experience by enabling greater flexibility and ease of use.

OT Admin

- I implemented a blog posting feature for seamless content management.
- I developed an employee management system to streamline internal processes.
- I managed top brands from the Admin Dashboard, overseeing brand-related operations and updates.
- I also handled the management of body-styles from the Admin Dashboard, ensuring efficient configuration and customization.
